

Your lamp does not use any extra hardware to attach the shade. It attaches directly to the base.

Connect the shade to the base before putting in your light bulb. To do this, turn the shade so that the metal arms are on bottom. Then simply press the shade onto the lamp base. The metal ring on the shade will fit snugly over the lamp base. After installing the shade, you can put your bulb on.

Do not try to attach directly to the bulb, nor using any harp and finial.
